

## HPSA Data Layer

<i>Category</i>	<i>Variable Name</i>	<i>Label</i>	<i>Format</i>	<i>Description</i>	<i>Suppress</i>	<i>ArcIMS</i>	<i>ArcView Proj.</i>	<i>Data Tables</i>	<i>Data Source</i>	<i>Data Date</i>	<i>Licensed</i>
ID	GEOID	Unique HPSA component ID	\$11	Unique ID for each geographic component of a Health Professional Shortage Area When HPSAAREA = WC, GC, or LC then GEOID = State + County FIPS Code When HPSAAREA = GM or LM then GEOID = State + County FIPS Code + MCD Code When HPSAAREA = GT or LT then GEOID = State + County FIPS Code + Census Tract	N	Y	Y	Y	Sheps Center/GDT/CE CS	1999	HRSA/UNC
geo	HPSAID	HPSA ID	\$5	HPSA ID is a 5-digit character variable that corresponds to the hpsaid variable in the analysis file. If the HPSA is a part-county geographic HPSA, then the HPSA ID is equal to a 4-digit unique identifier plus the letter G. If the HPSA is a whole county geographic HPSA, then the HPSA ID is equal to the state and county FIPS code. The original data	N	Y	Y	Y	Sheps Center/GDT/CE CS	1999	HRSA/UNC
geo	HPSANAME	HPSA place name	\$39	Name of designated Health Professional Shortage Area	N	Y	Y	Y	Sheps Center/GDT/CE	1999	HRSA/UNC
geo	HPSAAREA	HPSA area type	\$2	The HPSAAREA variable identifies the type of	N	Y	Y	Y	Sheps	1999	HRSA/UNC
				NOTE: This geographic file is missing 9 polygon components of certain HPSAs. This is partly due to the difference in data source for the geographic files: The PCSA project uses files that originated from the Census Bureau but were updated by GDT; the Sheps Center at UNC uses Claritas geographic files. As a result, these geographic boundary files may differ in polygon count. Five HPSA records do not match polygons in our MCD and Census Tract geographic files from GDT. The following GEOIDs had no corresponding polygon boundary and were not mapped: 12025004599 (FL), 18089030398 (IN), 26052025 (MI), 26005000500 (NY), 46021052							
				The following have duplicate GEOIDs, where only one occurrence of the duplicates was mapped: 06093050 (CT), 23017102 (ME).
